Goh and Mei are arguing about who completed their maths assignment correctly. The question on the paper wanted them to evaluate $15 - 5 \times (6 - 4)$ using correct order of operations.

Goh argued that the answer was 20, while Mei argued that the answer was 5.

Who was correct and why?

$$15 - 5 \times 2$$

$$= 15 - 10 \quad \checkmark$$

$$= 5 \quad \checkmark$$

\therefore Mei was correct as she evaluated the brackets first, then multiplied \checkmark
