

Changing Backdrops

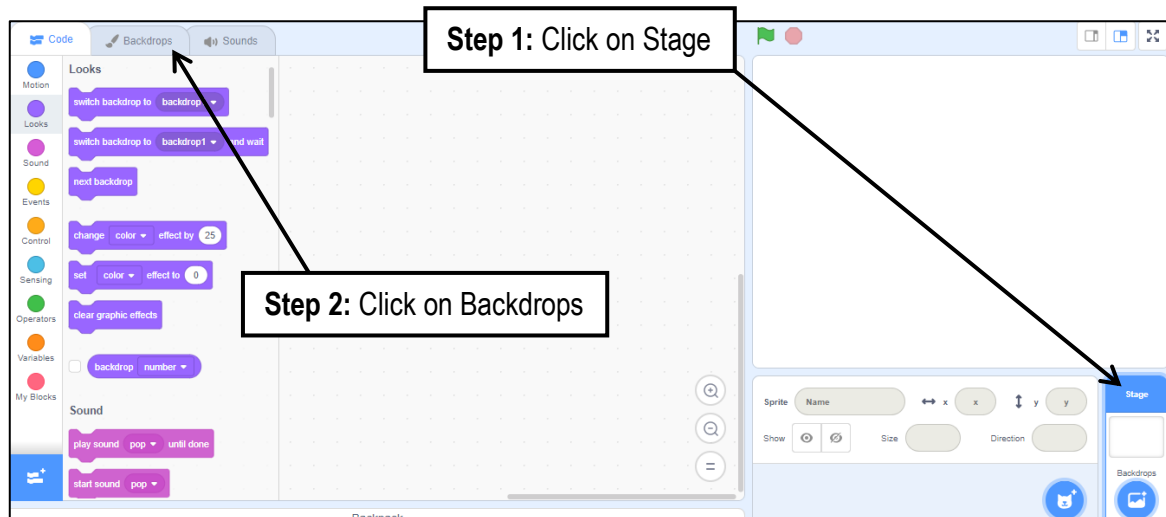

Backdrops

Sensing

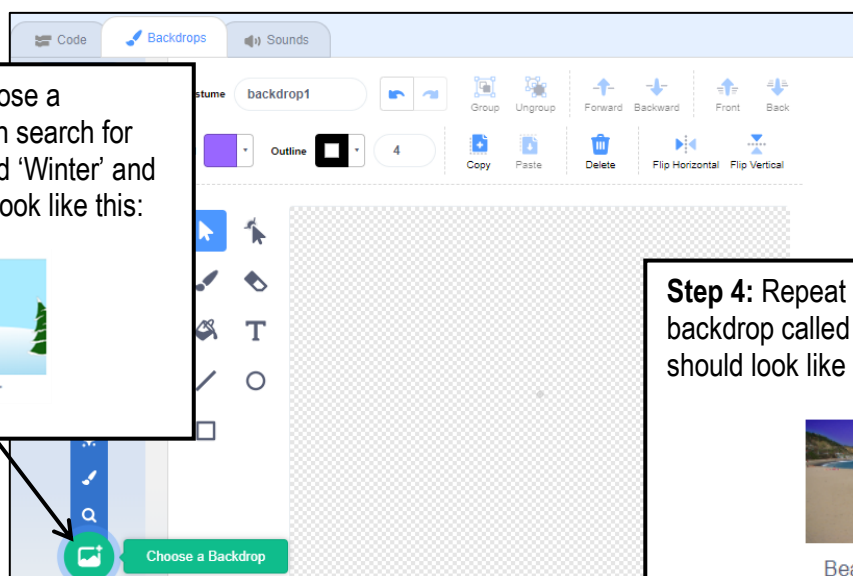

I Can	Tick
1. Insert backdrops	
2. Change backdrops	
3. Use sensing commands	

Task 1: Hot or Cold

1. Follow these steps to import 2 backdrops on the stage:

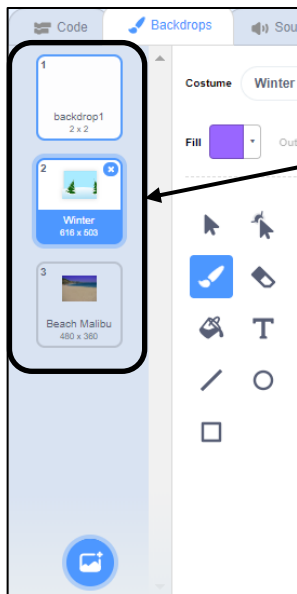

Step 3: Click 'Choose a Backdrop' and then search for the backdrop called 'Winter' and select it. It should look like this:

Step 4: Repeat Step 3 to also find the backdrop called 'Beach Malibu'. It should look like this:

You will notice that the backdrops section of Scratch contains the 2 backdrops you have selected. If you wish, you can delete the backdrop called 'backdrop1'.

2. Turn the following instructions into blocks and then create and test your script in Scratch

When the space is pressed
 Ask if the user is feeling hot or cold
 If the user feels hot
 Switch to backdrop Beach Malibu
 Otherwise
 Switch to backdrop Winter

- Print out your script from Scratch and stick it in this space.

- Explain what happened when you tested the script in Scratch:

When the space key was pressed, Scratch asked me a question to which I answered either yes or no. Depending on my answer the background changed.

Task 2: Design Scenery

1. In the 2 spaces, design 2 backdrops you would create in Scratch

Backdrop 1	Backdrop 2

2. Using the below tool from the New Backdrop panel, create your backdrops in Scratch. Remember to give them suitable names.

3. Create a script in Scratch which switches between the 2 backdrops you have created when a question is asked.

Print your code and paste it in the space below.
