Sample WACE Examination 2016

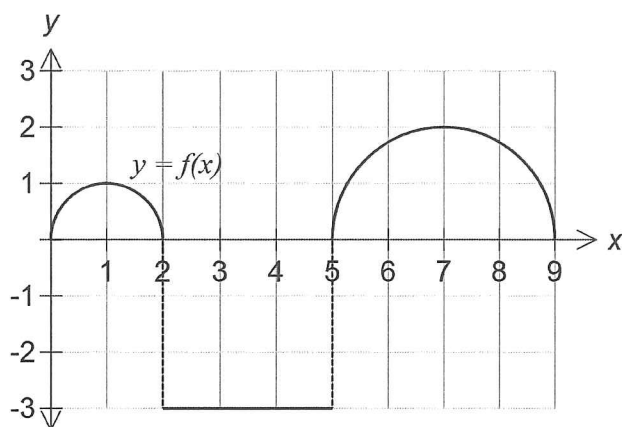

Marking Key

Marking keys are an explicit statement about what the examiner expects of candidates when they respond to a question. They are essential to fair assessment because their proper construction underpins reliability and validity.

Question 1

(4 marks)

Use the graph of $y = f(x)$ to calculate the following definite integrals.

(a) $\int_0^5 f(x) dx$

(2 marks)

Solution	
$\int_0^5 f(x) dx = \text{Area of semicircle} - \text{area of square}$	
$= \frac{\pi}{2} - 9$	
Specific behaviours	
✓ expresses integral as area of semicircle – area of square ✓ calculates integral correctly	

(b) $\int_0^9 f(x) dx$

(2 marks)

Solution	
$\frac{\pi}{2} - 9 + \frac{4\pi}{2} = \frac{5\pi}{2} - 9$	
Specific behaviours	
✓ uses additivity of integrals to write sum of areas ✓ calculates integral between 5 and 9 correctly	

Question 2

(7 marks)

(a) Solve, exactly, each of the following equations.

(i) $\log_x 4 = 2$

(2 marks)

Solution
$\log_x 2^2 = 2$ or $x^2 = 4$ $x > 0$ $2 \log_x 2 = 2 \Rightarrow x = 2$ $\therefore x = 2$
Specific behaviours
✓ uses log laws or definition of exponential ✓ correctly evaluates value of x

(ii) $e^{2x} = 5$

(2 marks)

Solution
$\ln e^{2x} = \ln 5$ $2x = \ln 5$ $x = \frac{\ln 5}{2}$
Specific behaviours
✓ applies logarithms to both sides of equation ✓ uses log laws correctly to determine exact value of x

(b) If $\log a + \log a^2 + \log a^3 + \dots + \log a^{50} = k \log a$, determine k .

(3 marks)

Solution
$\log a + \log a^2 + \log a^3 + \dots + \log a^{50}$ $= 1 \log a + 2 \log a + 3 \log a + \dots + 50 \log a$ $= (1+2+3+\dots+50) \log a$ $= (25 \times 51) \log a$ $= 1275 \log a$ $\therefore k = 1275$
Specific behaviour
✓ applies log laws to simplify expression ✓ factorises expression ✓ evaluates k

Question 3

(5 marks)

A curve has a gradient function $\frac{dA}{dt} = 60 - 3at^2$, where a is a constant.

Given that the curve has a maximum turning point when $t = 2$ and passes through the point $(1, 62)$, determine the equation of the curve.

Solution
$\frac{dA}{dt} = 60 - 3at^2$ <p>At $t = 2$, $\frac{dA}{dt} = 0 = 60 - 12a$ $\therefore a = 5$</p> <p>Hence $A = 60t - 5t^3 + c$ substituting $(1, 62)$ into the equation $62 = 60 - 5 + c$ $\therefore c = 7$ so $A = 60t - 5t^3 + 7$</p>
Specific behaviours
<ul style="list-style-type: none">✓ substitutes $t = 2$ into $\frac{dA}{dt} = 0$✓ evaluates a✓ anti-differentiates $\frac{dA}{dt}$ correctly✓ substitutes $(1, 62)$ and evaluates c✓ states the equation of the curve

Question 4

(5 marks)

Harry fires an arrow at a target n times. The probability, p , of Harry hitting the target is constant and all shots are independent.

Let X be the number of times Harry hits the target in the n attempts.

The mean of X is 32 and the standard deviation is 4.

- (a) State the distribution of
- X
- .

(1 mark)

Solution
The distribution is binominal.
Specific behaviours
✓ identifies the correct distribution

- (b) Determine
- n
- and
- p
- .

(4 marks)

Solution
$32 = np$ $4 = \sqrt{np(1-p)}$ $4 = \sqrt{32(1-p)}$ $16 = 32(1-p)$ $p = \frac{1}{2}$ $32 = \frac{1}{2}n$ $\therefore n = 64$
Specific behaviours
✓ states the equation $32 = np$ ✓ states the equation $4 = \sqrt{np(1-p)}$ ✓ solves simultaneously for n and p ✓ elevates n and p correctly

Question 5

(5 marks)

The continuous random variable X is defined by the probability density function

$$f(x) = \begin{cases} \frac{q}{x} & 1 \leq x \leq 3 \\ 0 & \text{elsewhere.} \end{cases}$$

(a) Determine the exact value of q .

(3 marks)

Solution
$\int_1^3 \frac{q}{x} dx = 1$ $[q \ln x]_1^3 = 1$ $q \ln 3 - q \ln 1 = 1$ $q = \frac{1}{\ln 3}$
Specific behaviours
<ul style="list-style-type: none">✓ states correct integral✓ integrates $\frac{q}{x}$ correctly✓ calculates value of q exactly

(b) Determine $P(2 < X < 3)$.

(2 marks)

Solution
$\frac{1}{\ln 3} \int_2^3 \frac{1}{x} dx = \frac{1}{\ln 3} [\ln x]_2^3 = 1 - \frac{\ln 2}{\ln 3}$
Specific behaviours
<ul style="list-style-type: none">✓ states correct integral✓ calculates probability correctly

Question 6

(6 marks)

- (a) Given $f'(x) = x^2 \ln(2x+1)$, determine $f''(x)$. Do not simplify.

(3 marks)

Solution
$f''(x) = 2x \ln(2x+1) + x^2 \frac{2}{2x+1}$
Specific behaviours
<ul style="list-style-type: none"> ✓ uses product rule correctly ✓ differentiates x^2 correctly ✓ differentiates $\ln(2x+1)$ correctly

- (b) Determine $f'(t)$, where $f(t) = t\sqrt{t} + \int_0^t \frac{dx}{1-x^2}$.

(3 marks)

Solution
$f(t) = t^{\frac{3}{2}} + \int_0^t \frac{dx}{1-x^2}$ $f'(t) = \frac{3t^{\frac{1}{2}}}{2} + \frac{d}{dt} \int_0^t \frac{dx}{1-x^2}$ $f'(t) = \frac{3t^{\frac{1}{2}}}{2} + \frac{1}{1-t^2}$
Specific behaviours
<ul style="list-style-type: none"> ✓ differentiates $t\sqrt{t}$ correctly ✓ use the theorem $F'(x) = \frac{d}{dx} \left(\int_a^x f(t) dt \right) = f(x)$ correctly ✓ states $f'(t)$ correctly

Question 7

(9 marks)

A particle moves in a straight line according to the function $f(x) = e^{\sin x}$, $x \geq 0$, where x is in seconds.

- (a) Determine the velocity function for this particle. (3 marks)

Solution
$\begin{aligned} \text{Velocity} &= f'(x) \\ &= \cos x \cdot e^{\sin x} \end{aligned}$
Specific behaviours
<ul style="list-style-type: none"> ✓ relates velocity to the first derivative of $f(x)$ ✓ determines the derivative of $\sin x$ ✓ applies the chain rule and states the correct derivative

- (b) Determine the rate of change of the velocity at any time, $x \geq 0$ seconds. (3 marks)

Solution
$\begin{aligned} \text{Rate of change of velocity} &= f''(x) \\ &= -\sin x \cdot e^{\sin x} + \cos x \cdot e^{\sin x} \end{aligned}$
Specific behaviours
<ul style="list-style-type: none"> ✓ states that the rate of change of the velocity $= f''(x)$ ✓ determines the derivatives of $\sin x$ and $\cos x$ correctly ✓ applies the chain rule and states the correct derivative

- (c) Evaluate exactly $\int_0^{\frac{\pi}{2}} f'(x) dx$. (2 marks)

Solution
$\begin{aligned} \int_0^{\frac{\pi}{2}} f'(x) dx &= [f(x)]_0^{\frac{\pi}{2}} \\ &= e^{\sin\left(\frac{\pi}{2}\right)} - e^{\sin 0} \\ &= e - 1 \end{aligned}$
Specific behaviours
<ul style="list-style-type: none"> ✓ uses $f(x)$ and the correct limits ✓ evaluates the integral correctly

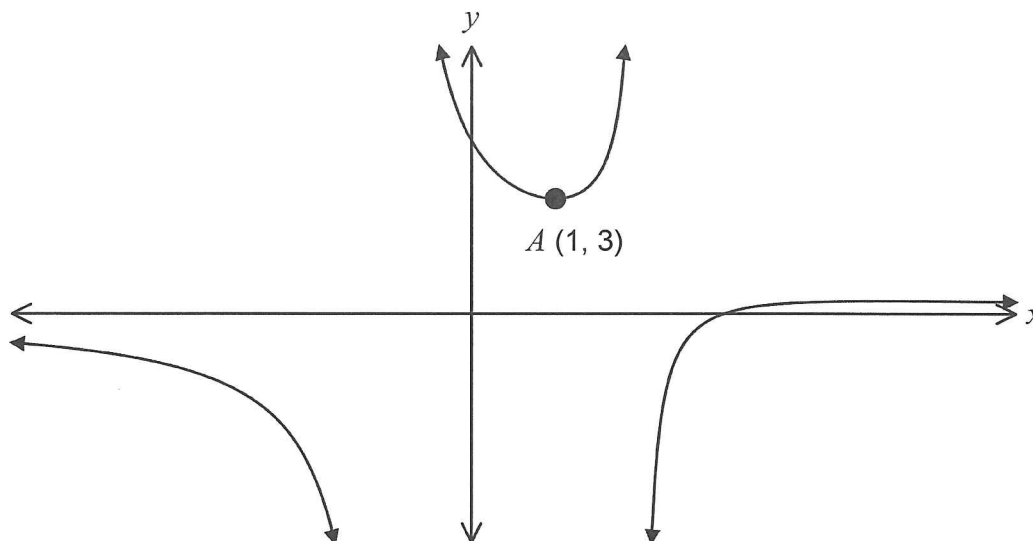

- (d) Interpret the answer to part (c) in terms of the context of the particle moving according to the function $f(x) = e^{\sin x}$, $x \geq 0$ seconds. (1 mark)

Solution
$\int_0^{\frac{\pi}{2}} f'(x) dx$ represents the displacement of the particle between 0 and $\frac{\pi}{2}$ seconds.
Specific behaviours
<ul style="list-style-type: none"> ✓ interprets the result correctly, referring to displacement

Question 8

(6 marks)

Consider the graph of $f(x) = \frac{3x-9}{x^2-x-2}$ shown below with a local minimum at $A(1, 3)$.

- (a) Show that $f'(x) = \frac{-3(x-1)(x-5)}{(x^2-x-2)^2}$. (3 marks)

Solution	
$\begin{aligned} f'(x) &= \frac{3(x^2-x-2) - (3x-9)(2x-1)}{(x^2-x-2)^2} \\ &= \frac{3x^2-3x-6 - (6x^2-21x+9)}{(x^2-x-2)^2} \\ &= \frac{-3x^2+18x-15}{(x^2-x-2)^2} \\ &= \frac{-3(x-1)(x-5)}{(x^2-x-2)^2} \end{aligned}$	
Specific behaviours	
<ul style="list-style-type: none">✓ uses quotient rule correctly✓ differentiates each of the terms correctly✓ simplifies correctly	

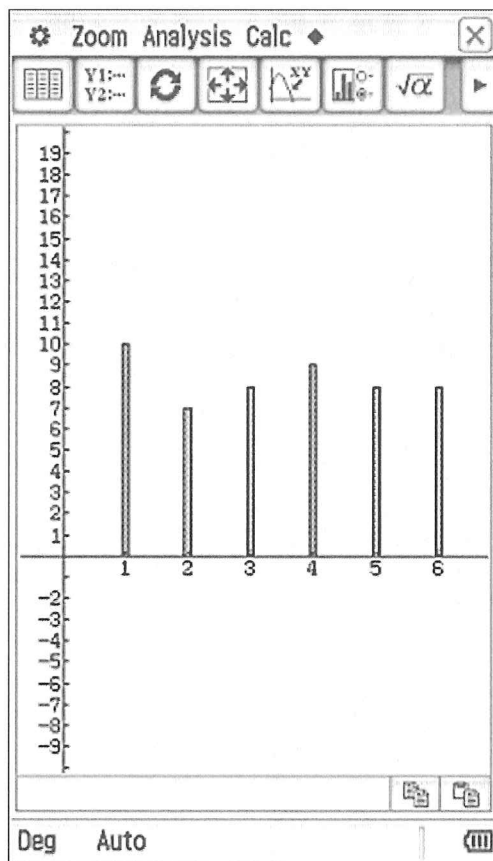

- (b) Hence or otherwise determine the coordinates of the local maximum value of $f(x)$.
(3 marks)

Solution
$\frac{-3(x-1)(x-5)}{(x^2-x-2)^2} = 0$ $(x-1)(x-5) = 0$ $x = 1, 5$ $\therefore \text{maximum at } x = 5 \text{ and maximum value of } f(x) \text{ is } \frac{1}{3}$
Specific behaviours
<ul style="list-style-type: none">✓ equates $f'(x) = 0$✓ solves for x✓ calculates maximum value of $f(x)$ correctly

Question 9

(5 marks)

The graph on the calculator screen shot below shows the results of a simulation of the tossing of a standard six-sided die, 50 times.

Simulated results of 50 tosses of a standard six-sided die

This simulation is repeated another 100 times.

- (a) Draw a frequency graph to illustrate the likely distribution of the proportion of even numbers obtained from the 100 simulations. (2 marks)

Solution																													
<table border="1"><thead><tr><th>Proportion</th><th>Frequency</th></tr></thead><tbody><tr><td>0.2</td><td>1</td></tr><tr><td>0.25</td><td>2</td></tr><tr><td>0.3</td><td>3</td></tr><tr><td>0.35</td><td>4</td></tr><tr><td>0.4</td><td>5</td></tr><tr><td>0.45</td><td>6</td></tr><tr><td>0.5</td><td>7</td></tr><tr><td>0.55</td><td>6</td></tr><tr><td>0.6</td><td>5</td></tr><tr><td>0.65</td><td>4</td></tr><tr><td>0.7</td><td>3</td></tr><tr><td>0.75</td><td>2</td></tr><tr><td>0.8</td><td>1</td></tr></tbody></table>		Proportion	Frequency	0.2	1	0.25	2	0.3	3	0.35	4	0.4	5	0.45	6	0.5	7	0.55	6	0.6	5	0.65	4	0.7	3	0.75	2	0.8	1
Proportion	Frequency																												
0.2	1																												
0.25	2																												
0.3	3																												
0.35	4																												
0.4	5																												
0.45	6																												
0.5	7																												
0.55	6																												
0.6	5																												
0.65	4																												
0.7	3																												
0.75	2																												
0.8	1																												
<p>An illustrative screen capture of a possible graph. Any roughly normal distribution, centred about 0.5, is acceptable.</p>																													
Specific behaviours																													
<ul style="list-style-type: none">✓ sketches a roughly normally distributed proportion✓ indicates that the centre of the distribution is 0.5																													

- (b) Comment on the key features of your graph, showing the results of the 100 simulations compared with the graph of the single simulated results in part (a). (3 marks)

Solution
<p>The distribution of the simulated results of 50 tosses of a standard six-sided die is roughly 'uniform' or constant, as it is based on the results of 50 Bernoulli trials. The graph in part (a) illustrates the result of the proportion of even numbers when the 50 Bernoulli trials are repeated 100 times. This proportion tends towards a normal distribution as the number of simulations increases.</p> <p>Hence the frequency distribution is roughly normal centred around $p = 0.5$.</p>
Specific behaviours
<ul style="list-style-type: none">✓ states that the given graph is based on a uniform or constant distribution and reflects the result of only one simulation✓ states that the distribution for part (a) approximates a normal distribution as n increases✓ states that the distribution is centred about 0.5
