Extra Challenge for Advanced Learners
Extension Activity

Directions: Consider the webpage below and what tags might be required to make it.

Thanksgiving

A great time to...

- See your cousins
- Eat too much
- Watch football
- Laugh as all of the adults fall asleep on the couch

24   </body>
25 </html>
```

Notes for the Teacher:

- If you would like this as an editable Google Doc, please email me at
- computerscienceandcoding@gmail.com. Thanks!
- Cut out the code snippets on slide 3 and pass them out to the class. There are 36, so depending on your class size you may want to give each student multiple pieces of code, or you may want to print copies and have each group of 3 put the code together.
- Display slide two of the website, and lead the class through discussions of what tags they expect to see. Then have students use their code snippets to collaboratively recreate the website's code.
- **Challenge!** Have students who finish early attempt to predict what CSS styles might have been used in the style sheet. These are provided on slide 6.
- **Extension:** Using the Thanksgiving HTML activity as a guide, have students (or groups) create their own Thanksgiving webpage, choosing their own color schemes, their own Thanksgiving traditions, and their own images. This is a good opportunity to reinforce usage rights of photographs and proper giving credit to the creator of the image.

Styles Answer Key (CSS)

body {

background-color:azure;
color:brown;

}

ul {

font-family:cursive;

}

img {

width:300px;
border-style:dotted;
border-color:brown;
border-width: 5px;
border-radius:50px;
padding:30px;

}
