# Landscapes and Landforms Revision

**Part 1: Describe the four geomorphic processes that form and transform landforms (1 sentence per geomorphic process).**

Tectonic Activity \_\_\_\_\_  
Weathering \_\_\_\_\_  
Erosion \_\_\_\_\_  
Deposition \_\_\_\_\_

**Part 2: Write the word that has been defined:**

Landscape, Landform, Block Mountain, Fold Mountain, Weathering, Erosion, Deposition

1. The breaking down of rock through the action of wind and water and the effects of climate, mainly by water freezing and cooling as a result of temperature change.

\_\_\_\_\_

2. A part of the Earth's surface. It consists of a variety of geographical features that are characteristic of an area.

\_\_\_\_\_

3. Mountains that are formed by the effects of folding on layers within the upper part of the Earth's crust.

\_\_\_\_\_

4. A mountain formed by natural faults in the earth's crust.

\_\_\_\_\_

5. Once the weathered and eroded material has been transported by running water, ice, waves or wind and is said to be 'laid down' or 'deposited'.

\_\_\_\_\_

6. A specific shape or physical feature of the Earth's surface that has been produced by a natural process known as a geomorphic process.

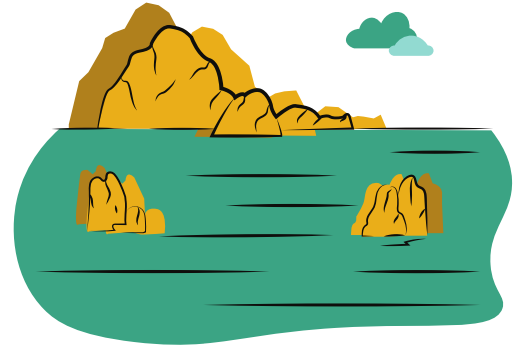

\_\_\_\_\_

7. The wearing away and removal of soil and rock by natural elements, such as wind, waves, rivers or ice, and by human activity.
