8 SCIENCE 2014 SCIENTIFIC METHOD TEST ANSUER 146,45 Mark: Percentage: % **SECTION A: MULTIPLE CHOICE** (5 marks) Select the most correct answer for each question below. 1. A description of the steps taken in an experiment is called the: discussion. (a) aim. method. ANSUFR KE hypothesis. 2. The correct prefix symbol for milli is: m (b) M (c) μ (d) n Which of the following is not an example of second-hand data? 3. Data written in a science journal. (a) Data written in textbooks. (b) (c) Data on the internet. Data you took from an experiment. An error due to guessing a measurement between an instruments markings would be: 4. (a) a human-reflex error. (b) a zero-error. (c) an instrumental error. a reading error. 5. Whether or not the hypothesis in an experiment was proved or disproved is written in the:

method.

aim.

discussion. conclusion.

(a) (b) are recorded daily.

		,
1.	State the difference between a mistake and an error.	(2 marks)
	Mistakes can be avoided if more	care
	istaken but errors can not be	
	avoided.	
2.	Read the experiment below then answer the questions.	
	e tank of gold fish is fed the normal amount of food once a day, gold fish in a second to ay and gold fish in a third tank are fed three times a day during a six week study. The f	

a) What is the aim of the experiment?	(1 mark)
To see whether gold fish grow quicker	
when they are fed more.	
b) Write down a hypothesis for the experiment. If gold fish are fed more then they vill	(2 marks)
grow quicker than goldfish fed a sr amount.	naller
c) State the dependent variable in the experiment. The weight of the goldfish	(1 mark)
d) State the independent variable in the experiment. The amount of food	(1 mark)
INE OMOUNT OF COU	

e) List two variables that would stay the same throughout the experiment (controlled variables).

(2 marks)

The type of fish

The period of the study

The number of times the fish

are fed each day.

The type of God.

Equipment name	Purpose	Scientific diagram
conical glash	A more stable way of storing and heating liquids, can close with a stopper.	
Beaker	To store & heat liquid (must have both)	
Tripod and gauze mat	To hold beakers above a flame (or bunsen burner) (1)	
Bunsen burner	Used to produce a flame for heating.	
Retort stand, bosshead and clamp	used to hold other equipment	
Filter paper and funnel	To separate solids from liquids in a suspension.	
Test Noe	For holding and heating substances () (must have both)	

Mistake: Events that can be avoided with cale. Error: Small charges to measurements that cannot be avoided. 5. Fill in the missing words. The line of best fit is a line drawn through the 'centre' of points on a (existing) Interpolation involves finding data on a graph using known data point (existing) Extrapolation involves extending a line on a graph by following the given data O.S 6. State which kind of data is shown below, qualitative data or quantitative data. b) Explain why you chose your answer.	/4 \
numbers are used.	(1 mark)
	(1 mark)

7. Write the term next to its matching definition below.

(5 marks)

spelling must be perfect

Data, second-hand data, quantitative data, first-hand data, qualitative data

a) Observations that use descriptions.

Qualitative data

b) Data not taken from an experiment.

second-hand data

c) Measurements that use numbers.

Quartitative data

d) Measurements and observations about something.

e) Data you collect from an experiment yourself.

first-hand data

Use the information in the table below to draw a line graph. 8.

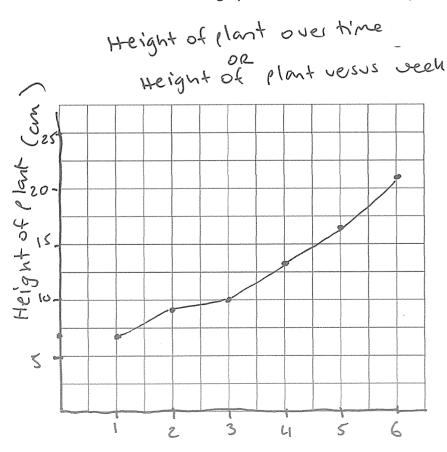

(5 marks)

Height of	Week
plant (cm)	
7	1
9	2
10	3
13	4
17	5
22	6

Take mark away

-incorrect title - not using rules/levail - headingson orong

- incorrect scale - missing unit of measurement
