Test 1 - Calculator Free

Total Marks: 18 marks

Time allowed: 15 minutes

Answer all of the following questions. Show all working to obtain full marks No calculator or notes permitted for this section

Question 1 [6 marks -1, 1, 2, 2]

Calculate the following percentages

a) 10% of 222 22.2 /4

b)

30% of 50

c) Increase 120 by 75% 75% or 3 - 90 V

> d) Reduce 90 by 11%

10/2 99

000

Question 2 [4 marks = 2, 2]

1210

Consider the following equation, $p=6 \times \sqrt{q-9} + k$

a) Evaluate p, if q = 18 and k = 25

1 6 × 518-9 + 25

229 My

Question 3 [4 marks = 1, 1, 2]

Consider the following equation, B=10A-3C

Evaluate B, if:

B= 10(4)-3(12)

a) A = 4 and C = 12

b) A = -2 and C = 10014 VEIN

6= 10(-2) -3(100) 1-20-300 NAW

c) $A = 4^2$ and $C = \frac{2}{3}$

6= 10(u2) -3(2) V 160

Question 4 [4 marks - 1, 1, 2]

Shane uses a spreadsheet to create his weekly budget. worked Income 462 Rent 200 Bills 50 Food Transport | Entertainment | Surplus 46.2 65.8

Shane earns \$22 per hour. If he types the number of hours he works into cell A2, what formula is required in cell D2 so that it calculates his income based on the number of hours he has worked

19

1 02 * A2

Shane earns his weekly income and receives \$75 per week in Government Rent Assistance. Each week he pays \$200 in rent and he always sets aside 10% of his pay to spend on entertainment. What formulas are needed to calculate:

b

the amount he sets aside to spend on entertainment.

1 D2 * 0.1 of - D2+10/100

the amount of surplus he has left at the end of the week

Ë

= 72 + 75 - SUM(E2: T2)

= D1+(75)- (E2+F2+G2+H2+I2) V D2+75/ E2-F2-G2-H2-12

Question 1 [8 marks – 2, 2, 2, 2]

a) Louise's bank shares rose by 15%. If they were originally \$0.40 each, what are they worth now?

b) Lisa earns 8% commission on sales. How much commission does she receive on a \$640 sale?

c) Bob purchased a car for \$23 500 and sold it 5 years later for \$8 900. What was Bob's percentage loss? Round your answer to 2 decimal places.

If GST (10%) was already added onto an account from a plumber and the account came t \$57.80, how much was the job before the GST was added on?

Question 2 [4 marks: 2, 2]

Currently Money-Bank's standard interest rates are at 6% p.a.

How much interest is earned on a \$2000 investment which is invested for 4 years with Money Bank's simple interest account?

- 4480

b) How much do they lose per month if the interest rates drop by 1% p.a.?

Question 3 [5 marks - 2, 3]

Skye, Travis and Aisha are planning a holiday to Canada. They have decided to budget and save in order to have enough money for the trip. They each need to save \$1500.

a) Aisha was lucky enough to win some money in a competition. Her entire holiday fund of \$1500 comes from her prize money. If this is 5% of her total prize money, how much money did she

- b) Skye is making and selling hair accessories to try and make enough money for the holiday. She spends \$100 on materials and with this she makes 300 hair accessories.
- i. If she sells each one for \$2.00, how much profit does she make?

What is her percentage profit?

iii. How many hair accessories does Skye need to make and sell in order to make enough money for the holiday?

goo hairessories

Question 4 [4 marks - 2, 2]

usually used on the adult plant. The dose (d units) that should be given to a seedling, of hA horticulturalist suggests that seedling growth would benefit from a particular vitamin which is plant, using the rule: $d=T \times \frac{1+h}{10}$. centimetres in height, can be calculated from the dose (T units) that would be given to the adult

a) If the dose for an adult plant is 11 units, what would the dose be for a 4 cm seedling?

b) The rule is valid for h up to a certain value. Determine the upper limit for h and explain you

Question 5 [7 marks - 2, 5]

a) If Clarence bought a jumper for \$23 on a 40% off sale, what was the price before it was discounted?

- b) A shoe store is having a sale. The sale is called 'Choose your discount'. Customers have a choice of Second Pair Half Price (where the cheaper of the two pairs is half price) or 25%
- i) Lisa has chosen a pair of boots for \$119 and a pair of flats for \$89. How much would she pay in total if she chose the Second Pair Half Price discount?

ii) Is Second Pair Half Price the best choice of discount? Justify your answer.

$$(119 + 89) \times 0.75 = $156.$$

$$156 < 163.50 \text{ by $7.50}$$
Question 6 [4 marks - 2,2]

Question 6 [4 marks - 2,2]

If we assume that the average annual rate of inflation were to remain steady at 4.5%, and has remained at this rate for several years leading up to now, how much would an item currently valued at \$50, be worth

in 7 years time?

9 two years ago?

Question 7 [3 marks]

Consider the following table outlining the family tax benefit payable to families with 1 child, based on their level of income.

FTB requirements and with a combined annual income of \$96,000. Determine the annual Family Tax Benefit (FTB) paid to a family with one child meeting the
